# SoftDent CDT 2026 Codes Installation Guide

## Installing ADA CDT 2026 Codes

This document contains instructions for using the CDT 2026 Update Utility to update the CDT codes in SoftDent, a Sensei product. This utility is intended for users running SoftDent, v14.0.3 and higher.

**Note**: If you are using a version of SoftDent prior to v14.0.3, you must upgrade or add the codes manually.

To install the CDT 2026 codes:

1. Close SoftDent on all machines.
2. *On the server*, click this link: https://gosensei.com/cdt-icd-codes/.
3. Scroll down to the **SoftDent CDT Codes Updates** section.
4. Click **Download Update**. A short form is displayed.
5. Complete the form and click **Submit**. The file **SetupCDTCodes.zip** is downloaded to your default download location, or you are prompted to save it, depending on your browser.
6. Right-click on the file, and unzip the file to a temporary folder or the desktop.
7. Double-click the **SetupCDTCodes.exe** file.
8. At the first prompt, click **Run** or **Yes**.
9. Read and accept the **End User License Agreement**. The codes are installed to the database. A message is displayed when the codes have been installed successfully.

When the CDT 2026 codes are installed, the database will have 31 new codes, 14 revised codes, and six code deletions.

**Note**: Visit the ADA website—www.ada.org—to find detailed information about the CDT 2026 code set.

If you have issues during the CDT 2026 code set installation, contact a Carestream Dental Support representative at https://gosensei.com/softdent-support/.
